APPLICANT TRACKING · NOW IN BETA

Filament ATS

Switch on your hiring.

Filament ATS is an applicant tracking system for technical hiring teams. Your roles, your pipeline, your candidates, your careers page, and your whole hiring team, working from the same live view, with an AI fit score on every new candidate. Your team runs it. Your data stays yours.

Built for the team doing the hiring.

Run by you.

BUILT FOR

CLIMATECH · ADVANCED MATERIALS · INDUSTRY 4.0

Startups and scaling teams · United States and Canada

Every role. Every candidate. One view.

01 · THE WORKFLOW

See every hire in full light.

Open a role, collect applicants, move them through your stages, and make the call, all in one place. Every candidate, every stage, and every note sits on one record your whole team can see.

JOBS

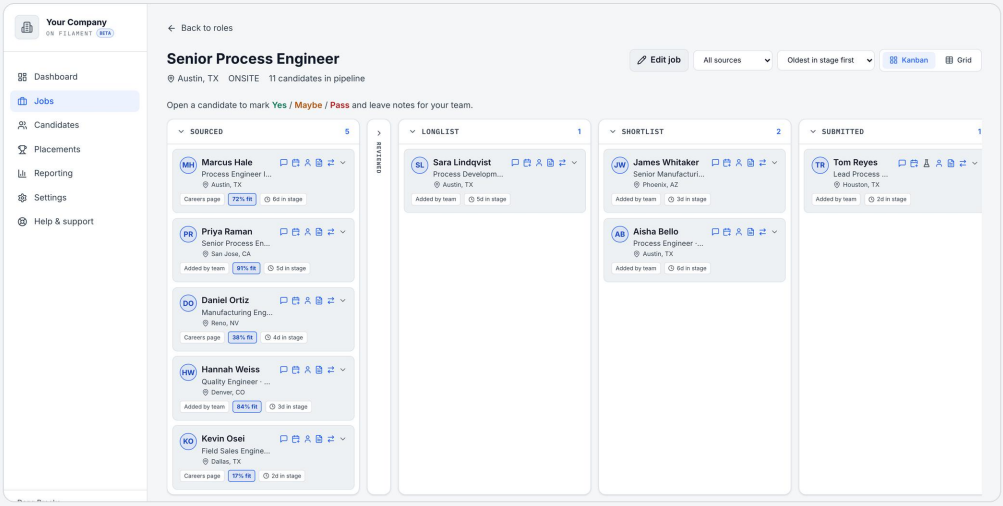

Create and edit roles, organize them by department, and assign each one to the hiring managers who own it.

PIPELINE

A board for every role, Sourced through Hired. Move candidates, leave notes, and mark each one green, yellow, or red as interviews happen.

CANDIDATES

Your own candidate pool: applicants, people your team adds, and anyone you bring over. Searchable down to resume text.

NEW · LINKEDIN CAPTURE

Chrome extension.

Save from LinkedIn in one click.

SAVE

Open any LinkedIn profile and add it to Filament with one click.

ADD TO A JOB

Pick the role and stage as you save, so they land on the right pipeline.

ALREADY IN?

See at once if they're on file and which pipelines they're in.

Filament - Save to ATS · Access set per teammate by your admins

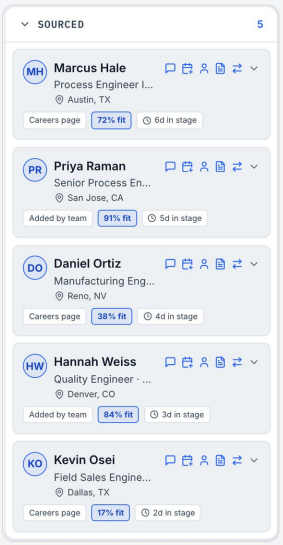

One pipeline. Your whole team in it.

02 · AI FIT

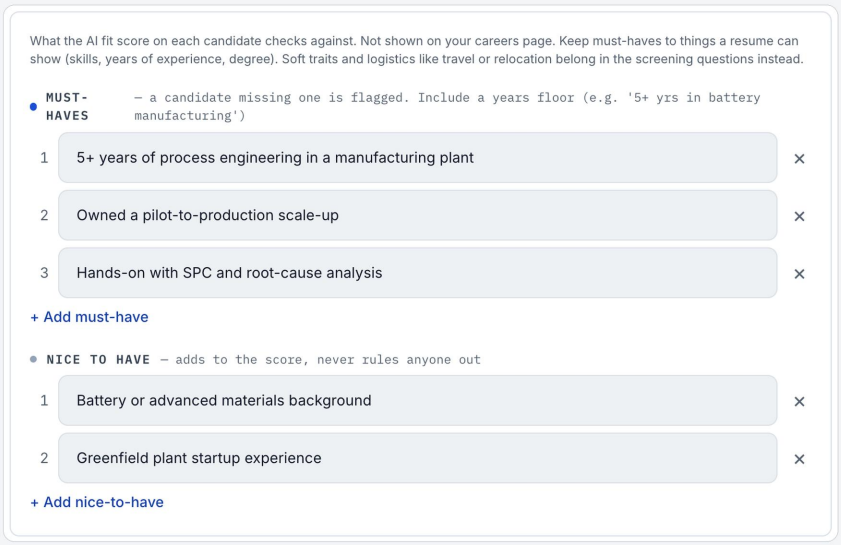

Every candidate, scored for fit.

As candidates come in, Filament ATS checks each full resume against your must-have criteria and job description, and puts a percentage fit right on their card. Your team starts with the people worth a conversation.

SOURCED, WITH AI FIT

YOUR MUST-HAVES FOR THE ROLE

RESUME + MUST-HAVES

The full resume, scored against your must-haves and job description: level, hands-on depth, and real evidence, not keyword overlap.

YOU SET THE BAR

Add must-haves and nice-to-haves to any role you run. Edit the role and live candidates are scored again.

EVERY WAY IN

Careers page applicants and the candidates your team adds are scored the same way, automatically.

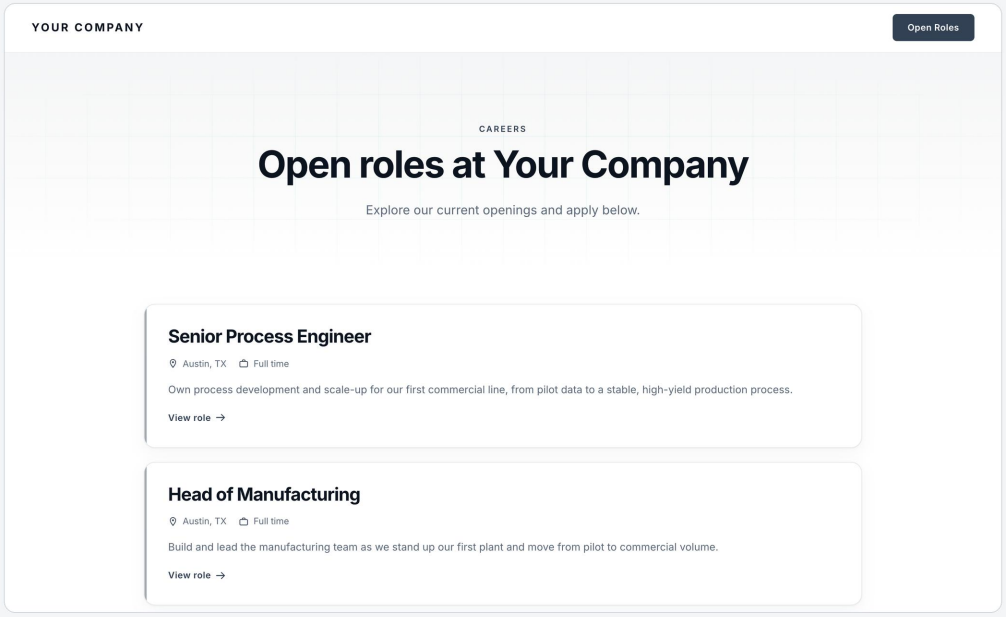

- **Right where you review.**
  The fit score sits on each card in Sourced, your first look.
- **Your team makes the call.**
  The score is a head start. The green, yellow, or red call stays yours.

Less sifting. More hiring.

03 · YOUR CAREERS PAGE

Publish a role. It's live.

Filament ATS includes a careers page under your name and your brand color. Publish a role and it is live. Every application lands straight in that role's pipeline.

UNDER YOUR BRAND

Your company name, your accent color, your roles. Candidates apply to you, not to a job board.

A PAGE PER ROLE

Every role gets its own page and link, ready to share on LinkedIn, in email, or anywhere else.

STRAIGHT INTO THE PIPELINE

No forwarding resumes from an inbox. No retyping. The applicant is already on the board.

- **You choose what's published.**
  Publish or pull any role from the page whenever you like.
- **Organized by department.**
  Roles are grouped the way your company is structured.

No inbox. No rekeying.

04 · YOUR TEAM

Everyone sees what they should.

Add teammates and hiring managers yourself, and decide what each person can see and do. Admins run the workspace. Hiring managers stay focused on their own roles.

ADMINS

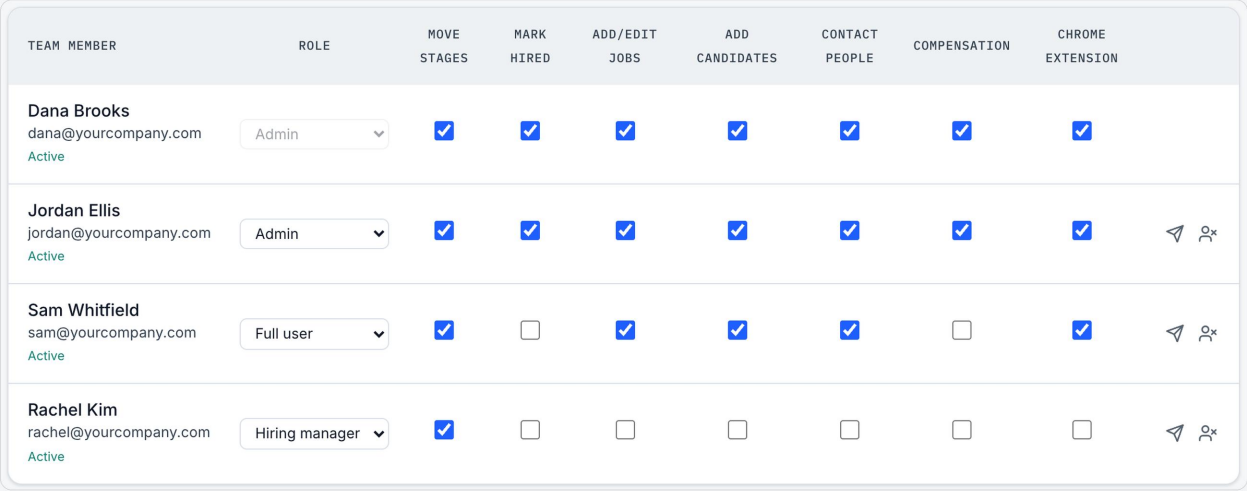

Manage users, departments, and settings. See every role and every candidate in the workspace.

TEAMMATES

Work the pipeline across the company's roles, within the permissions an admin grants.

HIRING MANAGERS

See only the roles they are assigned to. Nothing else in the workspace is visible to them.

- **Compensation stays need-to-know.**
  Salary and offer details are a separate, per-person permission.
- **Reporting built in.**
  Your hiring funnel and time in each stage, per role.
- **Placements on record.**
  Every hire your team makes, in one place.
- **Departments you control.**
  Admins keep the department list for the whole workspace.
- **Chrome extension access is yours to grant.**
  Admins choose which teammates can save from LinkedIn.
- **Access ends when you say.**
  Remove a teammate and their access is gone.

Your team. Your rules.

05 · YOUR DATA

Your data. Yours alone.

Candidate data is confidential, and the people in your pipeline trust you with it. Filament ATS is built so it stays yours.

Privately hosted

Filament runs on infrastructure VoltForce owns and operates end to end. No third-party SaaS vendor holds your pipeline.

Walled off

Every company's workspace is isolated from every other. An automated isolation test runs before every release, and a release that fails it does not ship.

Never mined

Filament is built by VoltForce, which also runs a recruiting practice, so we say it plainly: your pipeline, your applicants, and your careers page submissions are never used to source candidates for anyone else.

BUILT THAT WAY

Private hosting, walled-off workspaces, and a pipeline that is only ever worked for you. That is how Filament is built and how it is run.

Your pipeline stays yours.

GETTING STARTED

Start with your next role.

We set up your workspace, your careers page, and your team, and help move your open roles and candidates over. From there, your team runs it.

SET UP FOR YOU

Workspace, careers page, users, and permissions configured before your team logs in.

SIMPLE TO START

Priced per team and quoted for you. Design-partner terms are available during the beta.

ALWAYS IMPROVING

Filament is in active development. Beta partners shape what gets built next.

Step 1

Walkthrough

We look at how your team hires today.

Step 2

Setup

Workspace, careers page, users, and permissions.

Step 3

Move over

Open roles and candidates brought across.

Step 4

Live

Your team runs hiring in Filament.

NEED RECRUITING HELP TOO?

Filament ATS is software. It does not include a recruiter. If you want a specialist search, VoltForce, the firm that built Filament, offers that as a separate engagement, and the search can run inside the Filament workspace you already have.

See it on your own roles.
